Re: Application no. 10/725,226 filing date: 12/01/2003 Art Unit no. 3683

United States Patent & Trademark Office  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Dear Mr. Siconolfi,

In reply to your office action of 01/28/2009, I attach herewith an amended Appeal Brief to replace the previous one with the correct details as below:

1. The brief contains in Status of Claims: claims 4-13 (withdrawn),
2. The brief contains in Ground of Rejection a concise statement for review:  
the contents of claims being rejected in "Final" and those in brief are reorganized by switching certain depending claims to independent claims of a complete operative device as required by patent format,
3. The brief contains in Argument: separate headings of them are rewritten,
4. A copy of amended claims is enclosed as required,
5. Other: the last entered amendment filed on 8/26/05, its USPTO received copy is enclosed for your reference, it has the identical contents with the current claims, except the following two typing errors being corrected to meet the latest specification in the application:

*Instead of:*

its axis fixing between center and rim of a round wheel with connecting rod, ..  
(in claim 1)

placing with ball bearing centered to a wheel, ..  
(in claim 2)

*Now please read:*

connecting rod axis being fixed between center and rim of a round wheel, ..

rotating a wheel which centered to ball bearing, the wheel ..

I highly appreciate to have your prompt reaction to proceed your examination without further delay in view of the fact that Americans are being killed daily by traffic accident with a yearly amount of 42,500 victims, their lives should be saved if the invention is approved sooner to materialize for stopping traffic accidents.

Respectfully,

Henri Duong
